

BeeSeal Beeswax: Polishes and Protects Wooden and Leather Products

Wooden furniture adds elegance and warmth to our homes. They are timeless, durable, and provide a natural look to the surrounding. Be it the furniture in your bedroom, the dining room table, or the compact coffee table – each piece exudes glamour and reflects your style.

But, is regular dusting and cleaning enough to retain the original shine of **wooden furniture**? Can it also fix regular wear and tear? And what about those tiny yet dirty (stubborn) scratches?

Sure, wooden furniture requires very little maintenance. You don't need to spend hours every day polishing them. However, to keep them at their natural best and preserve the shine you love so much, you need to put in some extra effort. After all, the timeless pieces deserve that bit of extra attention.

We understand your busy schedules and know how much you hate the splotches on your furniture. To help you shine, polish, and protect your furniture with ease, we offer you the simplest solution.

BeeSeal multipurpose beeswax is the answer to all your queries!

[What is BeeSeal? How can it preserve my wooden furniture?](#)

BeeSeal beeswax is an original product from New Zealand. It's made to offer your home a non-toxic, pet and kid-friendly solution that's friendly to your pocket too. We've been consistently serving you for over 25 years now – just the way you like it.

Sourced from the local Manuka trees, our beeswax is an organic solution with no artificial colour or fragrance. It doesn't leave a sticky feeling on the furniture and emanates a natural fragrance once the polish has dried. You can polish and waterproof your **wooden furniture** just like you can add gloss to your wooden food bowls and chopping boards using the BeeSeal polish. Yes, our product can be safely used on all surfaces.

For the best results, dust your furniture well and then apply a coat of this eco-friendly polish. It will act as a natural preserver and restorer, and keep your wooden furniture shining as new. Regular use of the beeswax polish adds life to your Kauri, Pine, Rimu, and Birch-wood furniture. Add two coats for an elegant finish.

What else can I apply BeeSeal on?

BeeSeal beeswax is a multipurpose solution that you can apply on leather and oilskin products, besides wooden furniture. (You can safely apply it on Cordura and Gortex products.) It acts as your [leather jacket polish-protector](#) just the way it cares for your leather shoes, boots, and oilskin coats. A coat of the natural beeswax polish will waterproof and protect your leather jacket and smooth it without making it moist.

The polish preserves the natural flexibility and luster of leather products (furniture, upholstery) and is also ideal to use on saddles and cracked hooves of horses.

[How can I buy BeeSeal polish?](#)

To suit your requirements and pocket, BeeSeal beeswax is available in economic sizes (bigger cans) as well as in smaller handy pots. While our polish doesn't dry even when the can is left open, it is recommended that you purchase a handy pot if your requirement is small.

Call us now on +64 272750250 to place an order. You may purchase through bank deposit or PayPal. We will ensure that our fast delivery

services don't disappoint you. For our customers in New Zealand we have a special offer. If you purchase more than 10 items, no postal charges will be added to your order.

You can easily place an order from outside the NZ too – we deliver to our customers in other parts of the world too. Write to us at info@beeseal.co.nz for more information on our products or to place an extensive order.

So, what are you polishing today?
