

What Your Cleanse CAN and CAN NOT do

- *CAN cleanse your kidney and liver of dangerous toxins that cause belly fat and bad weight.*
- *CAN push out BAD bacteria that causes weight gain, lethargy, foggy brain and poor gut health.*
- *CAN help us to understand healthy habits that promote healthy living.*
- *CAN NOT keep off belly fat and bad weight if you put toxins back into your body.*
- *CAN NOT differentiate between good and bad bacteria. A probiotic is needed to replace good bacteria.*
- *CAN NOT be truly effective if we do not continue to use these healthy habits daily.*
