

All ABOUT THE BITCOIN WALLET

If you want to own Bitcoin, you need to have a Bitcoin wallet.
Everything you need to know is right here:

THE WALLET

What it does

The bitcoin wallet is a private account that interfaces with the blockchain. It can send Bitcoin as well as receive and store Bitcoin.

Without this account, you will not be able to own Bitcoin.

The Bitcoin wallet is comprised of 2 factors:

The Public Key

What is it?

The public key is akin to an email address. When someone needs to transfer Bitcoin into your wallet, they need to send it to this address.

You can share this key with anyone, it won't give anyone access to your account.

The Private Key

What is it?

The aptly-named private key is akin to your email password. To gain access to your Bitcoin wallet, you require your private key.

Don't forget to keep this key private at all times.

Using the Bitcoin Wallet

Getting a Bitcoin wallet is an easy online process. Once you've opened your private Bitcoin wallet account, you can start buying and selling Bitcoin. To use the Bitcoin in your wallet check out our Fundamental Bitcoin Course and learn how it's done.
