# How to connect Linksys extender

Here we will learn about [Linksys wireless extender setup](#) manually :-

- Firstly, take your computer and extender in the same room.
- Then, connect the computer to your extender through an Ethernet cord.
- To continue with Manually configuring a Linksys Wireless-N Range Extender, plug your extender and PC into a wall socket.
- Now, connect it to the Linksys extender setup- network.
- Then, enter extender.linksys.com in the URL field of an internet browser.
- A login page will appear, type the default credentials to complete the login stage.
- As the extender.linksys.setup screen pops up, enter the SSID of your router in the given field.
- Then, choose the manual option and then turn off your extender a few minutes. Again, turn on the extender properly.
- This was the last step for manually configuring Linksys Wireless-N Range Extender.
