

# LET YOUR KIDS BLOOM WITH PUZZLES!

## Synchronizing their moves

Kids are very keen on moving their eyes, hands and bodies towards objects and people that comfort and interests them. While using their limbs and legs, they are enhancing their eye and hand coordination.

## Developing motor skills

Solving helps in the development of fine motor skills, which are necessary in their day-to-day life. It also helps in enhancing their concentration power and grasping power.

## Sharpen their memory

Children like to repeat solving the same puzzle over and over again and this makes their memory sharp.

## Learning to solve the problems

For figuring out any problem, your toddler first needs to concentrate and think what approach should be followed in order to accomplish the task. And, puzzle-solving lend the patience to do so!

## Some more plus points

They help in the development of the logical and analytical skills of the child. Some puzzles optimize their Visual spatial awareness; some improvise their vocabulary, so on and so forth.
