

MALWARE ATTACK METHODS

FIVE MALWARE ATTACK METHODS MAY AFFECT YOUR PC

ZERO-DAY

A zero day vulnerability refers to an undisclosed flaw that the developers of malwares can exploit. These vulnerabilities are called Zero-Day, as they are not announced or reported to the public before they become active.

PRIVILEGE ESCALATION

Privilege escalation refers to situations where the hacker gets access to restricted data that are on high-level security

EXPLOIT

Exploit refers to a threat that is made real through successful attacks on vulnerability. The term exploit is also used to refer to software that is developed with the aim to target on the loopholes on a device.

BLENDED THREAT

This term is used to refer to a malware package that combines the characteristics of different types of malware like worms, Trojans, or viruses and seeks to exploit multiple vulnerabilities in the system..

EVASION

Evasion is the technique that malware developers use to avoid analysis and detection of the malware by security programs and software.
