

# TAKING CARE OF BOILER

## Annual Boiler Servicing

To keep your boiler running as efficiently as possible, arranging a boiler service in every 12 months should be your first course of action.

---

## Fix Issues Quickly

Whether your boiler requires a small repair or complete replacement, make sure you hire a qualified technician to carry out the work as soon as you can.

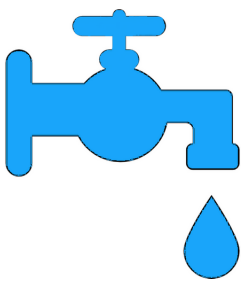

---

## Carbon Monoxide Detectors

Get a carbon monoxide detector if you are using a gas boiler because it will help you detect if there is any harmful gas present in your home.

---

## Powerflushing

Deep clean your radiators and boiler to flush out all the sludge, rust, and debris from radiators, pipes & boilers. It helps heating system work properly.

---

## Check Your Boiler Pressure

Prevent issues before they happen by monitoring your boiler's temperature, pressure, & water level time-to-time. Minimize downtime and repair cost.
