Common Internet Threat Children Face Online: Webroot.com/safe

1. Inappropriate Content:

You must have known that the Internet is full of “inappropriate content.” If in case, your kid tries to search for such content or if they accidentally open this type of website. Always keep in mind that your child can easily find this type of websites which contains inappropriate content if they are not blocked. So, you should invest in parental control software like

Webroot to block the websites which you don't want your kids to browse. You can also use a child-friendly browser which automatically blocks the websites which are unsuitable for kids. For more information about your kids, you should check the recent search histories in their devices through this way, you came to know which types of sites your child is visiting.

2. Chat Room “Friends”:

Some attackers enter in the chat rooms or they use social media to find young children. They make them friend and just pretend to be their age, and always tries to meet them. As you all know that setting up fake profiles is very easy. Hence, you should educate your child about fake profiles and also make them comfortable. You should also tell your child if they face any problem, then they always come to you. Also encourage your child to interact online only with those whom they know, like friends and relatives. Also tell them, do not meet anyone whom they met online as it is very risky.

3. Cyberbullying:

In cyber bullying, attackers do not have to leave their homes to interact with your children, and they don't have to be face to face with their victims. Attackers use social media sites in today's world to harm the children. You can prevent your kids from creating social media profiles and tell them to create when they get older. But if they understand, then remind your kids that they can always come to you if they're being attacked online.

4. Online Scams:

Some of the common scams are like email scams in which hackers attracts you that you have won large sums of money etc. To secure yourself from this type of scams is through Education. You must educate your child about online scams issues and also do not click on suspected links in emails or text messages.
