

# WHY DO YOU NEED A BUILDING PERMIT

- The permit lets you carry out construction, renovation, or remodeling projects on your existing or new property.
- You will need a permit for work related to structural changes, sanitation, zoning, water supply, drainage, fire protection etc.
- In case you are planning more than one type of construction project, you should take the required permits for a smooth project
- You do need the permit to ensure the smooth functioning of the project and to remain compliant with the local standards set up by the governing body.
- Not all types of construction or renovation work need a building permit. You can do simple repairs, rearrangement, or replacements without having to apply for a permit.
